

## Tom Stocky

*Advisor, Gates Ventures*

Tom Stocky is a technology executive and product leader who's focused on accelerating the path to more effective therapies for Alzheimer's disease. He serves on the board of the Banner Alzheimer's Foundation, on the technical advisory group for the Global Research & Imaging Platform (GRIP), and as an advisor for Gates Ventures.

Previously, Tom was VP of Search & Profile at Facebook, where he grew the service to billions of searches per day across trillions of posts. He also started the language technology team, which developed AI-powered translation and speech recognition engines. At Google, Tom was part of the founding team for Google App Engine, which gave rise to the Google Cloud Platform, and led teams working on Google search, commerce, and travel products.

In 2020, Tom made the shift to biotech, first as a Technology Fellow at Denali Therapeutics and then as SVP of Lab & Data Platform at Insitro. He leveraged his software and AI/ML expertise and led teams for lab software, automation, imaging, data pipelines, and ML-based modeling.

Tom has an MEng and BS in Computer Science & Electrical Engineering from MIT and an MBA from MIT Sloan.
